

Nandini Rao

Application A-06 - Junior Robotics Software Engineer - REQ-2026-014

Skills

Python, Git, Docker, image processing

Experience

Backend Developer, Finlyte (Jun 2024 - Jul 2026). Built Python services for a payments platform, wrote the containerised build with Docker, and owned the automated test suite. Managed releases through a Git branching workflow with peer review.

Projects

Self-directed transition into robotics: built an image processing pipeline in Python that tracks objects from a webcam feed, as preparation for perception work.

Education

B.Sc Computer Science, 2019 - 2022.

Cover Note

I am moving from backend engineering into robotics. My Python, testing and version control practice transfers directly; my robotics work so far is self-directed rather than professional.

This document is synthetic demo data generated for the X'O Code 2026 hackathon. It does not describe a real person.
